Quickly and easily develop your American Express payment interface.

American Express Payment SDK

Why spend unnecessary time on integration? Our payment Software Developer Kits (SDKs) deliver the tools you need to help minimize the development time to build and certify for a direct transaction processing solution. By processing directly with American Express, merchants may avoid processing fees and minimize potential points of failure for their American Express® Card transactions.

How can the payment SDK help you?

Whether you're a merchant, third party processor, gateway, or point-of-sale manufacturer, our Payment SDK takes care of the most cumbersome aspects of integrating to the American Express network by building in the required technical specifications and compliance elements, thereby reducing coding time and effort.

- **Accelerate** development and certification of direct processing with American Express
- **Integrate** American Express payment solutions to your point-of-sale applications or systems
- **Innovate** new solutions through creative

 November 2017

How **Payment SDK** Works:
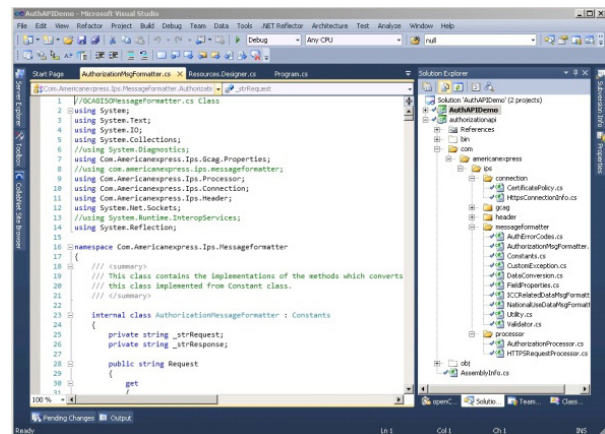

AMERICAN EXPRESS

Payment **SDK**

What's included in the SDK

Our SDKs are downloadable from our website and include the following items:

- **Documentation** – developer guides
- **Sample application** – a full-featured, demo application with source code
- **API code library for integration** – Jar (Java) or DLL, (.NET) files

Features at-a-glance

- SDK available in Java and .NET

- Authorization SDK manages the communication elements to integrate with our Internet Direct platform as well as Virtual Private Network (VPN) and Multi Label Processing Switch (MPLS)

- Submissions SDK manages communication with American Express Secure File Transfer (SFT)

- Submissions SDK manages communication with American Express for batch or real time submissions

- Provides access to American Express fraud protection tools and value added services associated with transaction processing
