

EMV[®] Secure Remote Commerce: A convenient online shopping experience.

Secure Remote Commerce (SRC) provides a consistent checkout across Merchant websites, mobile apps and other digital platforms where customers can click to pay with a streamlined and more convenient checkout experience.

CUSTOMER LOYALTY

SRC provides a convenient checkout that may not require Card Members to key in payment card information, resulting in an easier, faster checkout experience.

ENHANCED SECURITY

SRC combines both dynamic and encrypted data, an enhanced feature for online transactions which can help reduce the risk of fraud.

GROWING SALES

A consistent, familiar checkout experience can give Card Members greater confidence in their transactions, which can help reduce cart abandonment.

A consistent, convenient, checkout experience.

Every time Card Members recognize this icon  on a Merchant's checkout, they can benefit from a convenient and easier checkout experience.

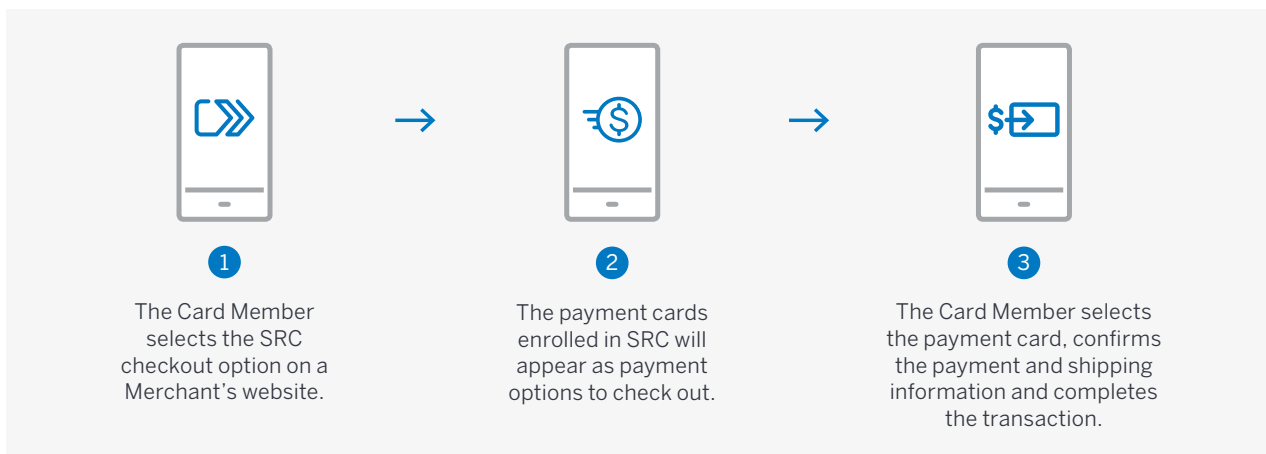

Card Members enroll once. Then payment is just a click away.

Through American Express interfaces, you can pre-enroll card data and enable your Card Members' Amex card for use at any Merchant that has enabled a Secure Remote Commerce solution.

In this case, when the Card Member chooses to pay with SRC, the Amex Card will be displayed as an option to check out, and a one-time passcode may be sent to confirm their identity before they finalize the purchase.

Card Members can also enroll directly when they choose the SRC checkout for the first time. The Card Member will input their Card information once as part of the enrollment process, and they will enjoy an easier, faster checkout experience with online Merchants.

How do Card Members click to pay?

More convenience and more security. All in one consistent shopping experience.

Contact your American Express Business Representative for SRC integration options with American Express.
